

WEEK 7 DAY 3 TASKS — CREDSSENTINEL

Decision Quality Reporting & Workflow Optimization

Bottlenecks Identified

- Model inference
- Feature computation
- Database connections
- Audit trail processing under concurrent load

Optimizations Applied

- Feature caching
- Prediction caching
- Connection pool tuning
- Background audit logging
- Concurrent request processing

Load Test Results

50 Users: 0.321 sec | 26.4 req/s | 0% errors
100 Users: 2.269 sec | 24.2 req/s | 0% errors
150 Users: 3.695 sec | 28.2 req/s | 0% errors

Production Readiness

PASS – System stable with 0% error rate. Additional infrastructure scaling required for sub-2 second latency at 100+ users.
